

Windows Deployment Services (WDS) Configuration

After completing Active Directory, DNS, DHCP, and Group Policy configuration, Windows Deployment Services (WDS) was installed on the Domain Controller (DC01) to provide centralized operating system deployment services within the enterprise environment.

1. WDS Installation

Windows Deployment Services role was installed on the Domain Controller.

Installation Procedure

1. Open **Server Manager**.
2. Click **Manage** → **Add Roles and Features**.
3. Select **Role-based or feature-based installation**.
4. Select server:

DC01.mahfujidb.com

5. Select **Windows Deployment Services**.
6. Under Role Services, select:
 - Deployment Server
 - Transport Server
7. Click **Install**.

Result

Windows Deployment Services role was successfully installed on DC01.

2. WDS Configuration

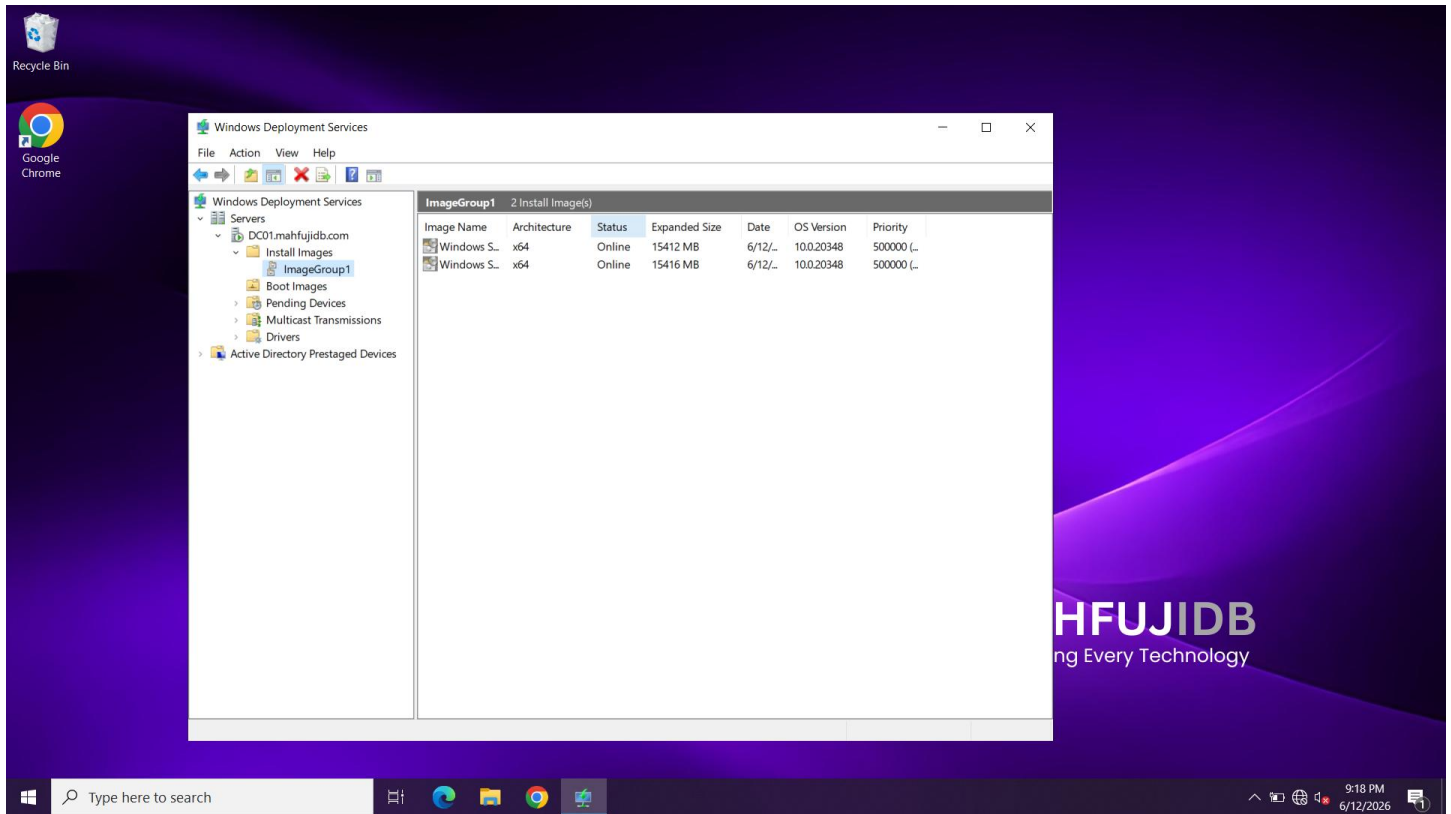

After installation, WDS was configured and integrated with Active Directory.

Configuration Procedure

1. Open **Server Manager** → **Tools** → **Windows Deployment Services**.
2. Expand the server node.
3. Right-click **DC01** and select **Configure Server**.
4. Select:
 - Integrated with Active Directory
5. Specify the Remote Installation Folder.
6. Configure PXE response settings.
7. Complete the configuration wizard.

Result

WDS was successfully configured and integrated with Active Directory Domain Services.

3. Boot Image Configuration

A boot image was added to support PXE-based operating system deployment.

Configuration Procedure

1. Expand **Boot Images**.
2. Right-click **Boot Images**.
3. Select **Add Boot Image**.
4. Browse to Windows installation media.
5. Select:

`boot.wim`

6. Complete the wizard.

Result

The Windows PE boot image was successfully added to WDS.

4. Install Image Configuration

Windows installation images were added to support operating system deployment.

Configuration Procedure

1. Expand **Install Images**.
2. Create a new image group.
3. Right-click **Install Images**.
4. Select **Add Install Image**.
5. Browse to Windows installation media.
6. Select:

install.wim

7. Complete the image import wizard.

Result

Windows installation images were successfully imported into WDS.

5. PXE Deployment Testing

A client virtual machine connected to the IT network was used to verify PXE deployment functionality.

Test Environment

Parameter	Value
Test Client Network	IT-SWITCH
Deployment Server	DC01.mahfujidb.com
Deployment Method	PXE Boot

Testing Procedure

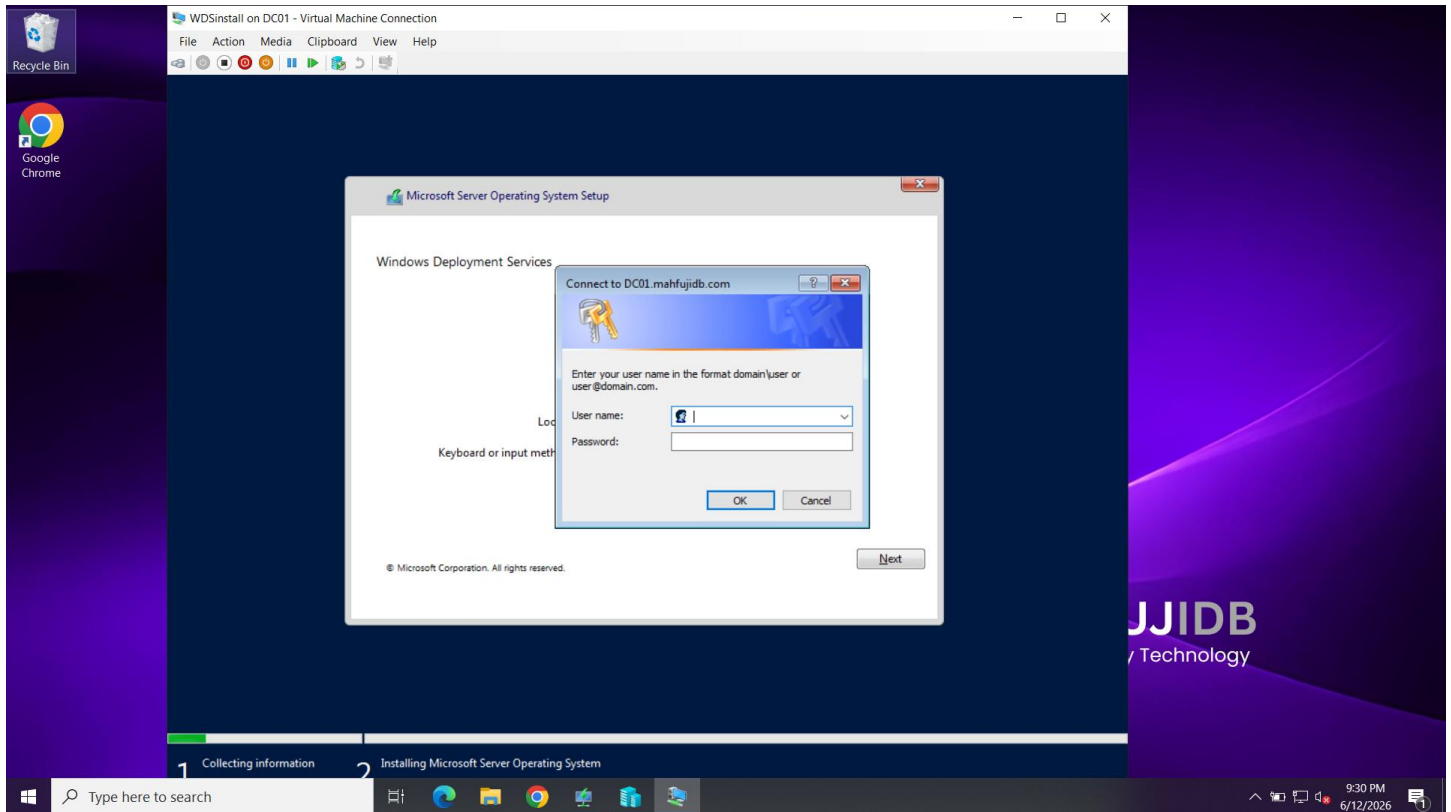

1. Create a client virtual machine in Hyper-V.
2. Connect the virtual machine to:

IT-SWITCH

3. Configure network boot (PXE) as the first boot option.
4. Start the virtual machine.
5. Verify that the client receives an IP address from DHCP.
6. Confirm connection to the WDS server.
7. Verify that available deployment images are displayed.

Result

The client machine successfully booted through PXE, connected to the WDS service on DC01, and displayed the available deployment images.

Final Result

Windows Deployment Services (WDS) was successfully installed and configured on **DC01.mahfujidb.com**. The service was integrated with Active Directory and successfully tested using a client virtual machine connected to the **IT-SWITCH** network, enabling centralized operating system deployment across the enterprise environment.
